# PHOTODYNAMIC THERAPY<sup>TM</sup>

sunlight-activated laser lotion

**Experience the new reality in skin rejuvenation.**

My solar powered Photodynamic Therapy captures UV light and refracts it into the same red light energy used by costly laser treatments and at-home anti-aging devices. It improves the appearance of fine lines and wrinkles, uneven skin tone and redness while enhancing skin elasticity and radiance. Normal daily activities like walking the dog, driving to the store or just sitting near a lamp or window will activate Photodynamic Therapy and keep it working throughout the day. No batteries required. So step into the light and reveal a younger-looking you.

Available at Sephora, Ulta, [dermadocor.com](http://dermadocor.com) or 877-DERMADR.
